## INSTALASI PYTHON

### A. Instalasi python pada windows

1. Buka browser, kunjungi <http://www.python.org/downloads/windows/>.
2. ATAU, klik direct link <https://www.python.org/ftp/python/3.4.3/python-3.4.3.msi>.
3. Buka (klik 2x) file installer python yang telah didownload.
4. Ikuti langkah instalasi sampai selesai.

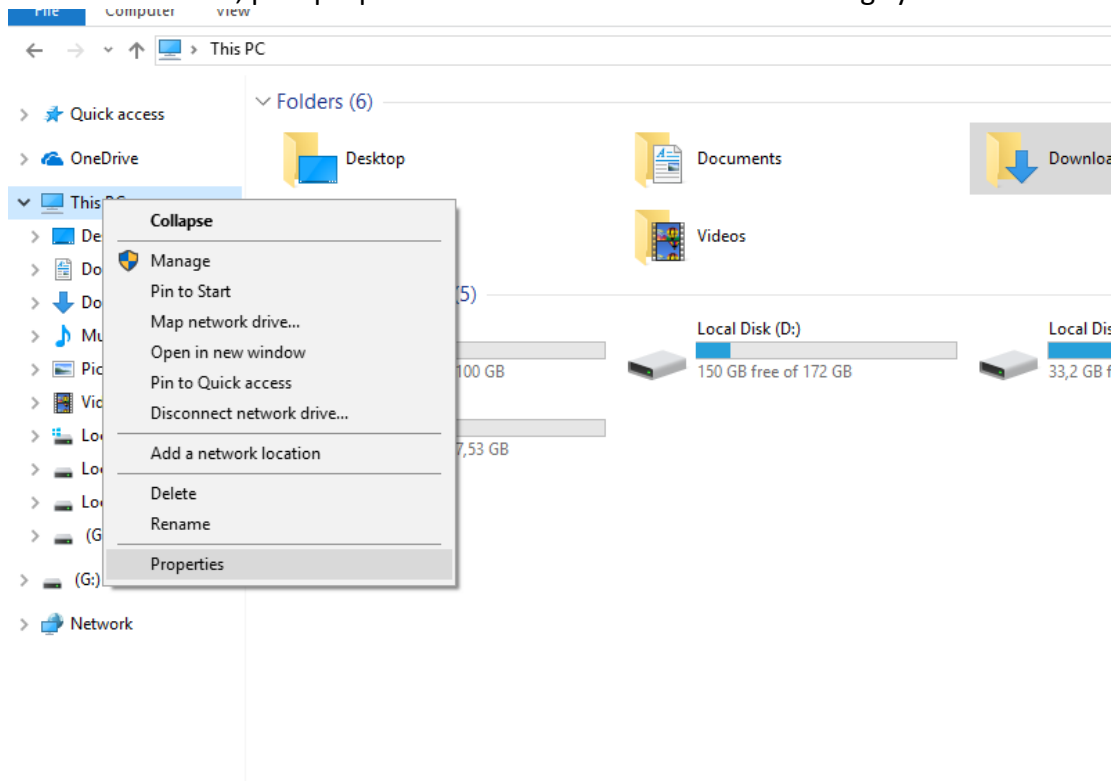

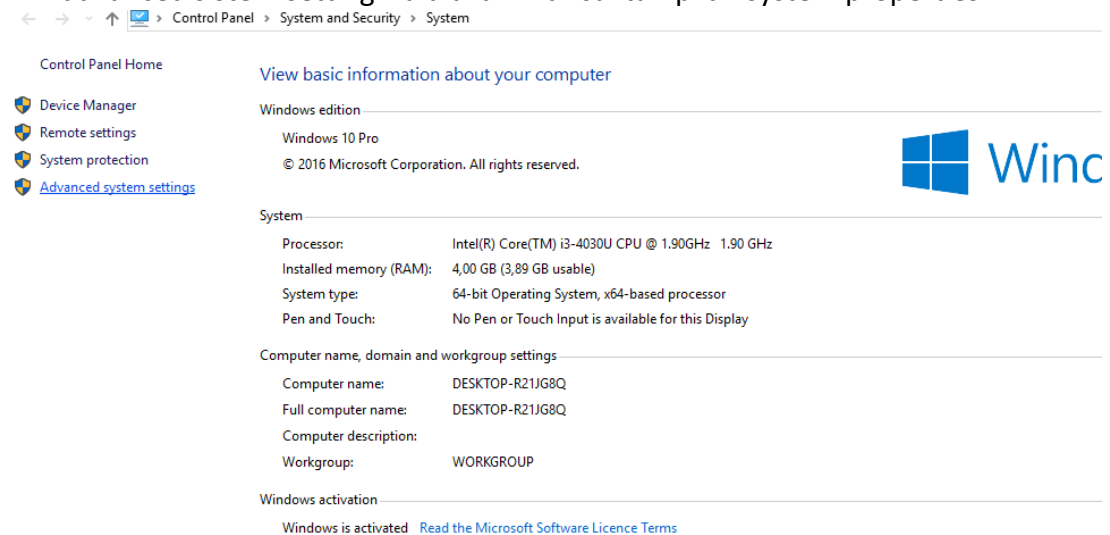

## B. Pengaturan path python

1. Buka windows explorer.

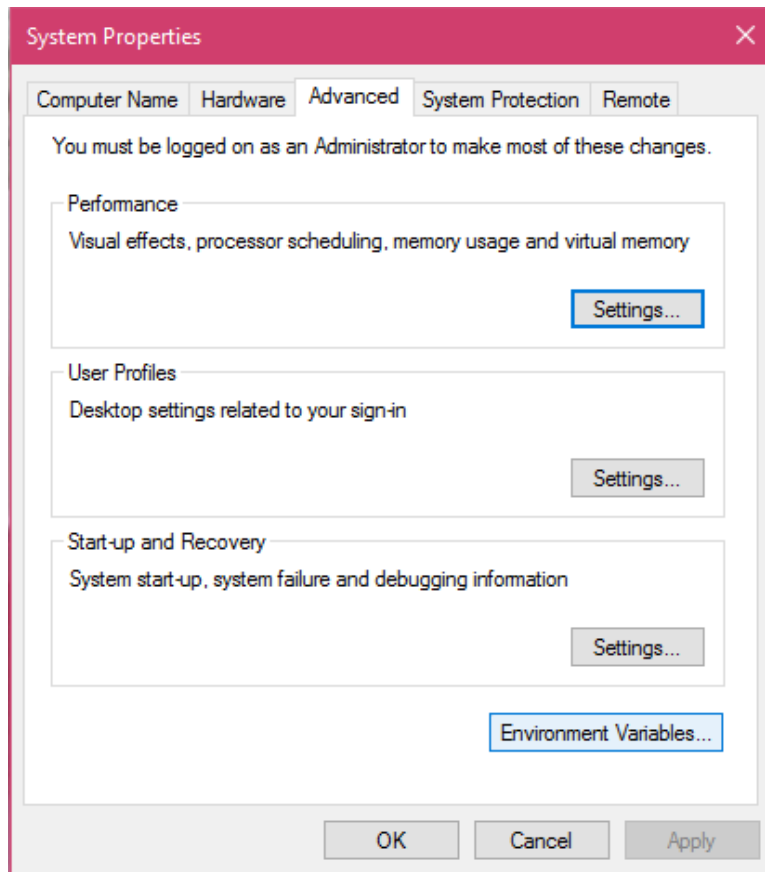

2. Klik kanan this PC, pilih properties dan akan muncul window dialog system.

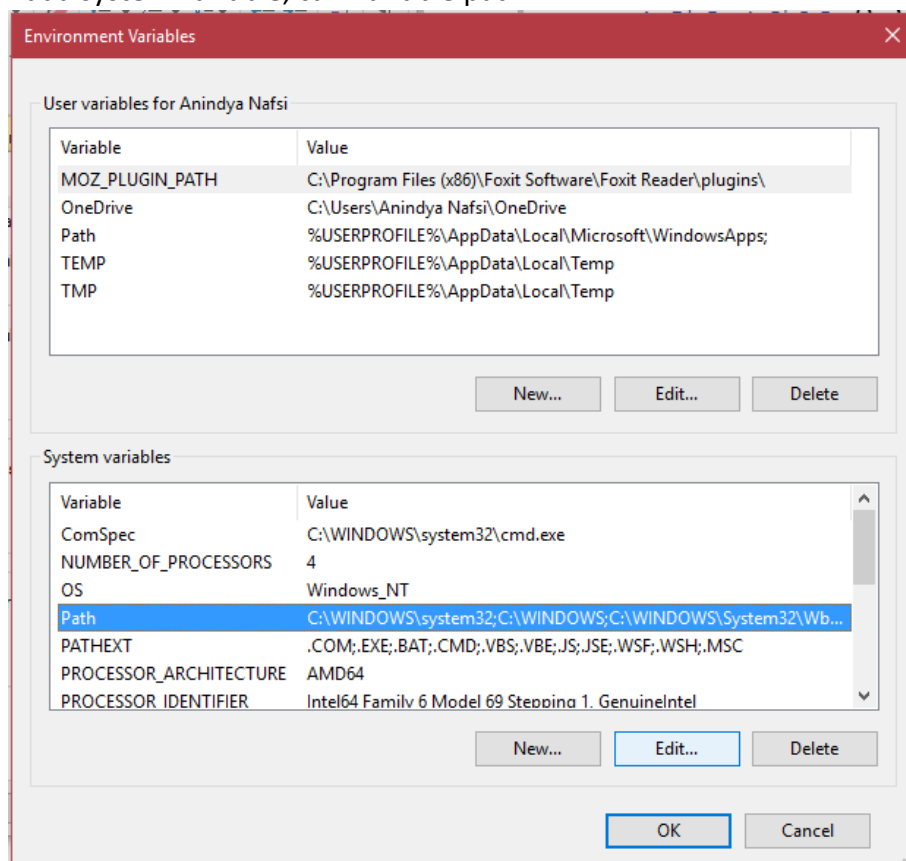

3. Klik advanced sistem setting. Lalu akan muncul tampilan system properties.

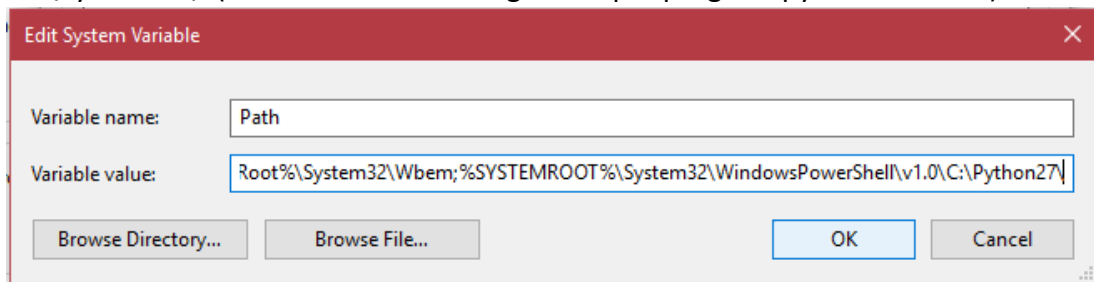

4. Klik environment variables.

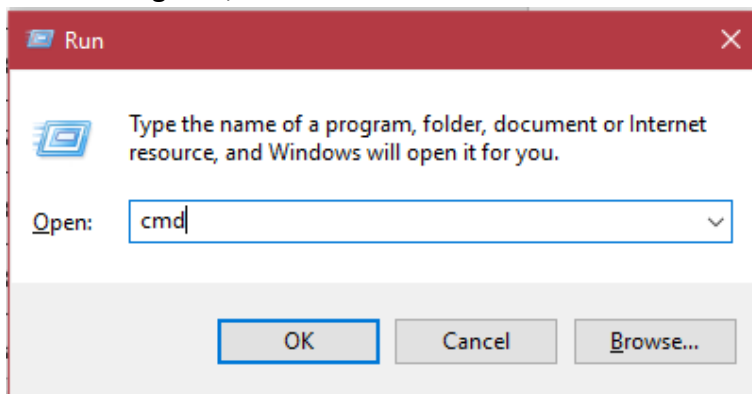

5. Pada system variable, cari variable path.

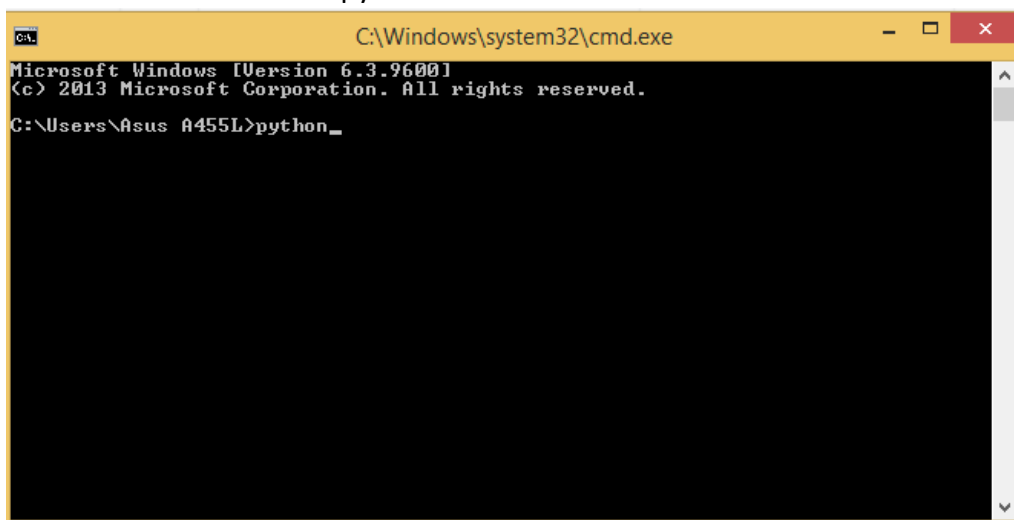

6. Klik edit pada variable path. Kemudian pada variable value tambahkan “C:\Python27\” (sesuaikan alamat dengan tempat program python terinstal).

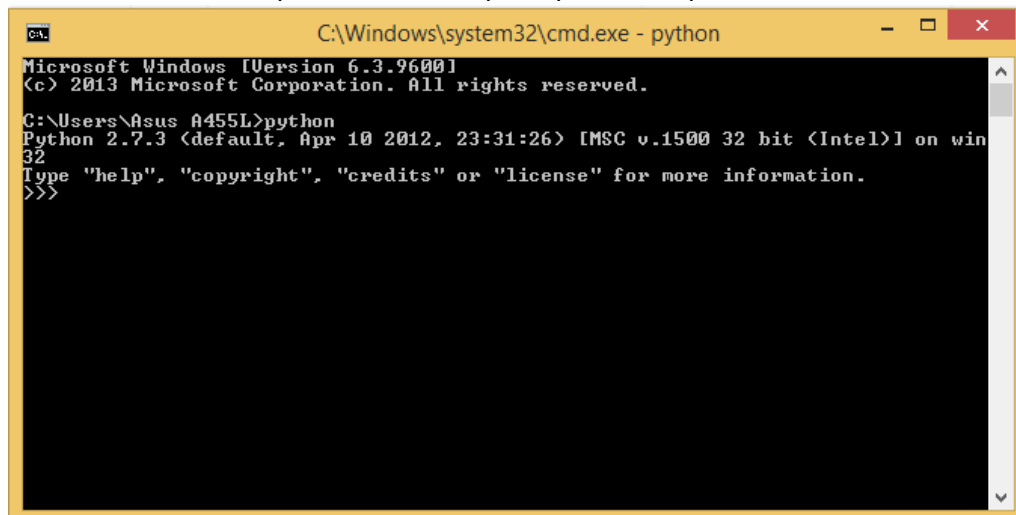

7. Untuk mengecek, klik tombol windows + R dan ketikkan “cmd”

8. Pada line command ketik python.

9. Jika benar maka tampilan command prompt akan seperti :

```
Ca. C:\Windows\system32\cmd.exe - python
Microsoft Windows [Version 6.3.9600]
